

W3C Validation Tests of the HTML Semantics

Verifying the semantic HTML rendered by each React page of the project

1. Purpose of this document

This document describes the validation tests I carried out with the official W3C validator (Nu Html Checker) on every page of the React project. The goal is to verify that the HTML produced by the application complies with semantic HTML and accessibility rules, and to document the fixes applied whenever an error was detected.

Since the project is a React single-page application (SPA), the final HTML does not exist in the source files: it is generated at runtime in the browser. It is therefore not possible to test a plain .html file. The chosen method is to copy the actual rendered DOM from the browser console, then paste it into the W3C validator.

2. Testing method

The procedure below is applied identically to every page of the application.

1. Open the page to be tested in Chrome.
2. Open the developer tools with F12, then go to the Console tab.
3. Type the copy command below, then press Enter.

```
copy("<!DOCTYPE html>\n" + document.documentElement.outerHTML)
```

4. Open the W3C validator: validator.w3.org/nu/#textarea.
5. Paste the content with Ctrl+V into the text area, then click Check.

Why this command

`document.documentElement.outerHTML` returns the entire rendered DOM, that is, the page exactly as React actually built it in the browser, with its full structure and all of its attributes. `copy(...)` places that result directly into the clipboard, which avoids selecting the code by hand.

The `"<!DOCTYPE html>\n"` prefix is added on purpose. The `<!DOCTYPE html>` tag sits outside the `<html>` element and is therefore not included in `outerHTML`. Without it, the validator reports a missing DOCTYPE. By concatenating it before the DOM, the pasted page is complete and valid on the very first try.

Note: the visual rendering and the styles of each page are preserved throughout the tests. The screenshots below show both the page as it appears and the result returned by the W3C validator.

CyberAudit & Solution

Presentation of the company

Our company supports organisations in two essential areas:

- Cybersecurity audit
- The fixing of flows

Our services

We secure your data, modernize your IT, and simplify your daily life. With our all-in-one solution, you benefit from robust cybersecurity and comprehensive support.

Ready to get started?

Create your account to submit an audit request and track it in real time.

Create an accountSign In

Risk audit & analysis

- Identification of vulnerabilities
- Risk analysis (EBIOS, ISO 27005)
- Clear and appropriate recommendations

Incident management & vulnerability fixing

- Ransomware
- Intrusion
- Data leak
- Restoration after incident

System Protection & 24/7 Monitoring (SOC)

- Attack detection
- Real-time alerts
- Quick response
- Access management (MFA, passwords, rights)
- Professional backups

Awareness

- Anti-phishing
- Team training
- Simple and useful best practices

Our packages

Pack	Included services	For whom?	Perimeter
Pack Audit	Audit & Risk Analysis (EBIOS RM)	SMEs new to cybersecurity	Initial assessment, vulnerability report
Pack Security	Audit + Incident Management & Vulnerability Remediation	SMEs that have experienced an incident	Audit + remediation of detected vulnerabilities
Pack Protection	Audit + System Security & 24/7 SOC Monitoring	SMEs with sensitive data	Audit + Continuous Monitoring & Real-Time Alerts
Pack Premium	Audit + Incidents + SOC + Team Awareness	SMEs seeking comprehensive coverage	The most comprehensive all-in-one solution

Homepage rendered in the browser, styles preserved.

Errors detected on the first test

Error 1 : Missing DOCTYPE.

Cause: `copy(document.documentElement.outerHTML)` does not copy the `<!DOCTYPE html>` tag because it sits outside `<html>`.

Immediate fix: add `<!DOCTYPE html>` as the very first line before pasting into the validator. This is not a flaw in the code, only a limitation of the copy method, now fixed directly in the command.

```
<!DOCTYPE html> <html lang="en">...
```

Error 2 : aria-label on a <div> without a role.

Cause: in Logo.jsx, a `<div aria-label="Logo CyberAudit & Solutions">` was used without a role attribute. The W3C forbids aria-label on a generic `<div>`.

Fix in the code: add `role="img"` to the two `<div>` elements that carry an aria-label.

```
<!-- Before --> <div aria-label="Logo CyberAudit & Solutions" ...> <!-- After --> <div
role="img" aria-label="Logo CyberAudit & Solutions" ...>
```

W3C check after the fix

Document checking completed. No errors or warnings to show.

Used the HTML parser.

Total execution time 7 milliseconds.

4. Conclusion

Every page of the React project was tested with the W3C validator following the same procedure. The two initial errors found on the homepage were addressed: the DOCTYPE is now included directly in the copy command, and the `role="img"` attribute was added in `Logo.jsx` to make the use of `aria-label` compliant.

After the fixes, each page passes validation with no errors or warnings, which confirms that the semantic HTML rendered by the application complies with W3C rules.
