Introduction

CyberAudit & Solutions is a cybersecurity startup project developed by three students from different training schools in Dijon through “Les Entrep’,” an entrepreneurial association that supports students in starting their own businesses.

The services offered by CyberAudit & Solutions include:

- Risk assessment and analysis (EBIOS RM methodology)
- Incident management and vulnerability remediation
- System protection and 24/7 monitoring (SOC),
- Team awareness training

As part of the Holberton School portfolio project, we are designing a full-stack web platform for small and medium-sized businesses without in-house IT expertise.

The platform allows SME clients to choose a service package from among CyberAudit & Solutions’ four offerings, submit their service request via a structured form, receive an immediate email confirmation, track the progress of their case in real time, view clear vulnerability reports, and access awareness modules, all within a secure environment featuring role-based access control and JWT authentication.

TEAM FORMATION AND ROLE DEFINITION

1. Initial Meeting: Team Presentation

Meeting Objective

The initial meeting builds team cohesion, clarifies each member's role, defines collaboration rules, and lays the foundation for effective communication over the 8-week project.

Member Presentation

Member	Role	Key Strengths	Areas of Interest
Tommy JOUHANS	Front-End	Organisation, coordination, product vision, React	UX design
James ROUSSEL	Back-End	Django, DB architecture, REST API, system security, Python	Infrastructure, network security, automation

Role Assignment & Justification

Member	Technical Role	Justification	Coordination Role
Tommy JOUHANS	Front-End Developer	Proficient in HTML, CSS, JavaScript and React framework	Validates design choices, manages Front-End code reviews
James ROUSSEL	Back-End Developer	Expert in server architecture, PostgreSQL, Django API security and Celery async tasks	Validates architecture choices, manages Back-End code reviews

Communication & Collaboration Rules

Tool	Usage	Frequency
Discord	Daily communication, dedicated channels (#frontend, #backend, #general)	Every day
GitHub	Versioning, feature branches, mandatory Pull Requests with code review	With every development and regular commits
Notion / Google Docs	Technical documentation, meeting notes, task tracking	Updated after every work session
Weekly Check-in	Weekly review, blockers identified, next week planning	Once a week, at least 30 minutes

Conflict Resolution Protocol

- Any major technical decision is made jointly after discussion on Discord
- In case of disagreement: both solutions are prototyped on a separate Git branch. They are compared on 3 objective criteria: performance, maintainability, and estimated delivery time
- If no consensus after 48h, the project manager has the final say on product priorities
- The technical lead has the final say on Back-End architecture decisions

2. Weekly Task Allocation

Task allocation is based on each member's technical role while maintaining close collaboration at integration points (API, testing, deployment).

Wk	Focus	Tommy JOUHANS (Front-End)	James ROUSSEL (Back-End)
W1	Design	Figma/Balsamic mockup wireframes, User Stories, frontend stack, README init	DB schema, entity modelling, security library choices
W2	Environment	Init React project, component structure, Tailwind CSS and .env	Init Django, PostgreSQL config, app structure, environnement variables
W3	Auth & Security	Login/Register pages, client-side JWT tokens, protected routes	User model + roles, JWT auth endpoints, password hashing, rate limiting
W4	Core Features 1	Audit request form, Client dashboard, status display	CRUD API for requests, input validation, SQL injection protection, email acknowledgment
W5	Core Features 2	Admin dashboard, report display, training module	PDF report generation, file upload, training endpoints
W6	Async & Performance	Notification display, UI pagination, client-side errors	Celery + Redis (emails, asynchronous PDF), API pagination, DB optimisation
W7-10	Testing	React component tests, end-to-end tests, DOMPurify, User experience (UX) testing (3 sessions)	Django unit tests, Postman API tests, XSS/SQL injection checks
W11-12	Deployment	Frontend deployment (Vercel/Render), domain config, slides	Backend + DB deployment, HTTPS SSL, final technical documentation

3. What is a Stakeholder?

A stakeholder is any person, group, or organisation that is affected by a project, can influence it, or has an interest in its outcome.

Type	Definition	Example in our project
Internal stakeholder	Part of the organisation or project team	Tommy JOUHANS, James ROUSSEL
External stakeholder	Outside the organisation, but impacted or influential	SME clients, banking partners, certification bodies
Direct stakeholder	Uses or is directly impacted by the project	Platform users (CyberAudit Admin, SME Client)
Indirect stakeholder	Impacted secondarily, without direct use	Employees of client SMEs, GDPR regulators
Primary stakeholder	High influence AND high interest	Project team, Holberton jury, SME clients
Secondary stakeholder	Moderate influence or interest	Partner banks, IT suppliers, ISO bodies

4. List of Stakeholder: Roles & Impacts

Stakeholder	Type	Role in project	Impact	Influence
Tommy JOUHANS	Internal / Direct	Full-Stack Developer, creates the visible web interface	● Very high	● Very high
James ROUSSEL	Internal / Direct	Back-End Developer, security & DB	● Very high	● Very high
Holberton Jury	Internal / Direct	Evaluates project, awards certification	● Very high	● High
CyberAudit & Solutions (Les Entrep')	Internal / Indirect	Entrepreneurial programme, provides business context	● High	● Moderate
SME / VSE Clients	External / Direct	End users and submit audit requests	● Very high	● Moderate
CyberAudit Admin	External / Direct	Manages audits, generates reports daily	● Very high	● High
Partner Banks	External / Indirect	Facilitate payments, finance client projects	● Moderate	● Low
Certification Bodies (ISO/GDPR)	External / Indirect	Define compliance standards	● High	● Moderate

5. Stakeholder Roles by Phase

Each stakeholder plays a different role depending on the project phase. This table helps you anticipate interactions and involve the right people at the right time.

Phase 1 — Initiation (S1)

Stakeholder	Role during this phase
Tommy + James	Define the project vision, user stories, technical architecture, and user personas
Jury Holberton	Verify the project's relevance and technical scope
CyberAudit & Solutions (Les Entrep')	Provide the business context and cybersecurity challenges facing small and medium-sized enterprises

Phase 2 — Planning (S1-S2)

Stakeholder	Role during this phase
Tommy + James	Divide up the tasks and set up the tools (Git, Discord, Notion)
SME customers (personas)	Guide the design of features based on the identified persona profile (Marie)

Phase 3 — Execution (S2 à S6)

Stakeholder	Role during this phase
Tommy JOUHANS	Develops the React frontend, pages, and components; integrates the API and forms from the package
James ROUSSEL	Develops Django templates, API endpoints, security, databases, and confirmation emails
IT Vendors	Provide the security tools and libraries used in the project

Phase 4 — Monitoring & Control (S7-10)

Stakeholder	Role during this phase
Tommy + James	Cross-testing, bug fixes, validation of user scenarios, and UX testing (x3)
GDPR/ISO Bodies	Compliance Framework : Standards Guide Validation Criteria

Phase 5 — Clôture & Déploiement (S11-10)

Stakeholder	Role during this phase
Tommy + James	Launch the website, write the documentation, and prepare the presentation
Jury Holberton	Evaluate the deployed project and ask technical and business questions
SME customers (demo)	Demonstration scenario used during the defense: package form + acknowledgment of receipt

6. RACI Matrix: Responsibility Assignment

Task	Tommy Front-End	James Back-End	Holberton Jury	CyberAudit & Sol.	SME Client
Wireframes & mockups	R	C	I	C	I
Database schema	C	R	I	I	-
Overall technical architecture	A	R	I	I	-
JWT authentication system	C	R	I	-	-
Login/Register pages (React)	R	C	I	-	-
REST API — Audit requests	C	R	I	-	C
Client & Admin Dashboard (React)	R	C	I	-	C
PDF report generation	C	R	I	-	A
Async tasks (Celery)	I	R	I	-	-
XSS protection (DOMPurify)	R	C	I	-	-
SQL injection protection	C	R	I	-	-
Unit & API tests	R	R	I	-	-
Production deployment	R	R	I	I	I
Documentation & Presentation	R	R	I	C	I

R = Responsible A = Accountable C = Consulted I = Informed

7. Conclusion: Why Analyze Stakeholders?

Profit	Concrete application in our project
Anticipating expectations	The jury expects a fully deployed and secure application: we are planning to deploy and conduct security testing on S11-12 during S7-10
Managing Relationship Risks	Clear communication guidelines on Discord help prevent misunderstandings and conflicts
Prioritize features	The needs of our SME clients (Marie persona) guide the backlog: package selection, acknowledgment of receipt, reports, and training
Clarify responsibilities	The RACI matrix prevents duplication of effort and areas of uncertainty between Tommy and James
Ensure compliance	GDPR and ISO standards guide our security decisions even though they are not direct users

In short, stakeholder analysis is more than just listing names: it's a strategic tool that helps the team focus on what truly matters to each project stakeholder.

BRAINSTORMING & IDEA EVALUATION

1. Brainstorming Session: 3 Key Techniques

The team conducted individual research followed by a structured collective session. Three techniques were combined to maximise creativity.

Technique 1: Mind Mapping

Visualise all ideas around a central node and explore their natural connections.

 Audit	 Protection	 Training	 Incident
• Vulnerability detection • EBIOS risk analysis • Vulnerability report	• 24/7 SOC • MFA & access • Cloud backup	• Anti-phishing • Team awareness • Best practices	• Rapid response • Data restoration • Crisis management

Technique 2 : "How Might We?" Questions

 Question asked	 Idea generated
... help an SME with no IT team detect vulnerabilities?	Turnkey SaaS with a simple dashboard
... make cybersecurity financially accessible?	Monthly subscription scalable by company size
... raise awareness without boring employees?	Gamified micro-training and anti-phishing simulations
... prove the value of an audit to a sceptical CEO?	Visual report with security score + executive summary
... enable continuous monitoring without costly infrastructure?	Outsourced SOC via subscription with real-time alerts

Technique 3 : 5 Whys Analysis

Level	Question / Answer
Problem	SMEs are hacked and lose critical data
Why 1	Because they have no IT protection in place
Why 2	Because they have no dedicated IT team (45% of SMEs, Source: ANSSI SME Report 2023)
Why 3	Because hiring a cybersecurity expert cost €50,000+/year (Source: APEC salary barometer 2023)
Why 4	Because no affordable and simple solution exists for their size
Why 5: Root Cause	The market only offers complex tools designed for large enterprises
 Solution	Create an all-in-one, simple, affordable platform designed specifically for SMEs/VSEs

2. The SCAMPER Method: Ideation Applied to Projects

SCAMPER explores 7 angles of innovation from an existing solution. We start from a classic cybersecurity audit tool to imagine our differentiating platform.

Principle	Question asked	CyberAudit & Solutions application
Substitute	What can we replace?	Replace costly on-site consultants with a 24/7 accessible SaaS (with or without travel)
Combine	What can we combine?	Audit + SOC monitoring + training in a single all-in-one subscription
Adapt	What to adapt from another sector?	Telemedicine model: remote diagnosis + report + follow-up, applied to IT security
Modify	What to scale up or down?	Reduce report complexity, translate jargon for non-technical managers
Put to other use	Use differently?	Audit report = commercial proof of GDPR compliance for financial partners
Eliminate	What to remove?	Eliminate long unreadable PDFs and replace with visual dashboard and security score
Reverse	Invert the process?	Proactive alerts: expert detects a vulnerability and contacts client first

Brainwriting: Individual Ideas Before Group Discussion

Tommy JOUHANS — Individual Ideas	James ROUSSEL — Individual Ideas
• Simple UX dashboard for non-technical executives • Visual security score (similar to an energy rating) • Interactive anti-phishing training course • Push notifications for critical alerts • Onboarding wizard for SMBs • Responsive design for field access • Progress bar for the audit lifecycle • Color-coded risk levels in the dashboard	• Secure and scalable REST API architecture • Asynchronous tasks for report generation • EBIOS/ISO 27005 analysis integrated into audits • Immutable audit logs for GDPR compliance • Rate limiting and brute-force protection • Email notification pipeline via Celery • Role-based system with granular permissions • Automatic injection of security headers (HSTS, CSP)

3. Idea List & Ranking

After brainstorming, 5 main ideas emerged. Each idea is scored 1–5 on 4 criteria. Max score = 20.

Project Idea	Feasibility	Impact	Team Fit	Scalability	Score	Decision
☒ SME Audit Management Platform	5	5	5	4	19/20	☒ CHOSEN
Phishing detection mobile app	3	4	3	4	14/20	⚡ V2 Module
Gamified training tool	4	3	3	3	13/20	Integrated
SOC network monitoring dashboard	2	4	3	4	13/20	V2
Consultant marketplace	2	3	2	5	12/20	✗ Rejected

Reverse brainstorming: Validating a choice by taking it to the extreme

Instead of trying to figure out how to solve the problem, we try to figure out how to make it worse, and then we reverse the answers.

✗ How can you make the problem worse?	☑ Derived (inverted) solution
An interface so complex that small and medium-sized businesses are giving up	→ User experience is a top priority: simple design, three clicks or fewer, labels written in plain language
Unreadable reports filled with technical jargon	→ Unreadable reports filled with technical jargon
Never inform the customer of the status of their request	→ Automatic email notifications + confirmation of receipt upon submission
Audit Request Form (No Service Selection)	→ Structured form with a selection of packages from among the 4 services offered
A single administrator who manages everything without delegating	→ Granular role-based system with customizable permissions

4. SWOT Analysis of the Chosen Idea

STRENGTHS • All-in-one solution (audit + SOC + training) • Tech stack mastered by both team members • 24/7 responsiveness with continuous monitoring • Tailored for small structures with no internal IT • Jargon made accessible for non-technical managers	WEAKNESSES • Zero brand awareness at launch • Team of 2, high workload • GDPR/ISO complexity may deter some clients • Recruiting cybersec experts difficult long-term
OPPORTUNITIES • Constant rise in cyberattacks targeting SMEs • Legal obligation: GDPR + NIS2 directive (Source: ENISA 2023 Threat Landscape) • Massive digitalisation of SMEs and local authorities • Talent shortage driving outsourcing demand (Source: CESIN 2023 Barometer) • Lack of accessible solutions on the market	THREATS • Competition: Cybermalveillance.gouv.fr, Vaadata, Mailinblack • Rapidly evolving threats — constant monitoring required • Legal risks if a vulnerability goes undetected • SME distrust of cloud solutions

SELECTION & DEFINITION OF THE FINAL MVP

1. Final MVP Definition Sheet

Problem Identified

 Problem

45% of French SMEs/VSEs have no internal IT team (Source: ANSSI "Panorama de la cybermenace" 2023). They are exposed to increasingly frequent cyberattacks (ransomware, phishing, data breaches) but lack the skills or tools to protect themselves. Existing solutions are designed for large enterprises: too complex, too costly, inaccessible. Result: SMEs suffer preventable attacks, lose critical data and risk heavy GDPR penalties (up to 4% of annual turnover).

Solution

 Solution

A full-stack web platform from CyberAudit & Solutions that connects small and medium-sized businesses with cybersecurity experts. It allows users to submit an audit request in just a few clicks, track progress in real time, view a clear and easy-to-understand vulnerability report, and access awareness training modules—all within a secure environment with JWT authentication.

Customer journey: Service request form with pack selection

The SME client accesses the platform and submits their request in 3 simple steps. In step 2, they choose one of the 4 service packages offered by CyberAudit & Solutions.

Step		Description of the customer journey			
1	Login & Authentication	The customer logs in using their JWT credentials (or creates an account). The platform detects their “SME Customer” role and redirects them to the customer dashboard.			
2	Select a service package	The customer fills out the application form and chooses from the 4 available packages:			
		Pack	Included services	For whom?	Perimeter
		 Pack Audit	Audit & Risk Analysis (EBIOS RM)	SMEs new to cybersecurity	Initial assessment, vulnerability report
		 Pack Security	Audit + Incident Management & Vulnerability Remediation	SMEs that have experienced an incident	Audit + remediation of detected vulnerabilities
		 Pack Protection	Audit + System Security & 24/7 SOC Monitoring	SMEs with sensitive data	Audit + Continuous Monitoring & Real-Time Alerts
		 Pack Premium	Audit + Incidents + SOC + Team Awareness	SMEs seeking comprehensive coverage	The most comprehensive all-in-one solution
3	Submission & Automatic Acknowledgment	The customer submits the form. The system automatically sends a confirmation email containing:			
		- A summary of the request (selected package, services, submission date) - The automatically generated unique case number - Estimated processing time based on the selected package - A link to their dashboard to track the status in real time			

Administrator View: Viewing and Processing Requests

The CyberAudit administrator accesses their dashboard, which displays a complete list of customer requests.

Admin Features	Description	Technical details
Viewing Requests	Paginated list of all requests sorted by status and date	Filtres : statut, pack, date, client : tri ascendant/descendant
Details of a request	Filters: status, package, date, customer: sort ascending/descending	Access from the dashboard: "View Details" button
Change in status	Admin passe la demande du client. En attente → En cours → Terminé → Archivé	Automatic email notification to the customer whenever a change occurs
Report Generation	Admin processes the customer's request. Pending → In Progress → Completed → Archived	Report that customers can download from their dashboard
History & Traceability	Immutable logs of all actions performed on the folder	GDPR Compliance: Timestamping, Author of Each Action

Email Acknowledgment Template (Celery Async)

Subject: [CyberAudit & Solutions] Confirmation of your request: Case No. {id}

Hello {first name} {last name},

We have received your request for cybersecurity services. Here is a summary:

- Username: {user_name}
- Selected package: {pack_name}
- Services included: {services_list}
- Submission date: {date}
- Case number: {dossier_id}
- Estimated turnaround time: {delai_estime}

You can track the status of your request by logging in to your customer account.

Our team will contact you as soon as possible.

The CyberAudit & Solutions Team

User persona: Marie, SME executive

Persona

Marie, 45, manages an accounting firm with 12 employees in Dijon. She uses Excel and Gmail every day but has no technical background. She recently received a phishing email and is concerned about a potential leak of client data. She recently received a phishing email and is concerned about a potential leak of client data. She selects a package, submits her request, and immediately receives a confirmation email so that a cybersecurity engineer can intervene securely..

Target audience & users

Profil	Description	Besoins principaux
Small and Medium-Sized Business (SMB) / Microbusiness	Manager of an SME with fewer than 50 employees, without a dedicated IT specialist	Easy package selection, instant confirmation, real-time tracking for clear diagnostics, turnkey solution, GDPR compliance, peace of mind
Admin CyberAudit	Cybersecurity expert who handles requests and generates reports	Efficient management interface, automatic generation of PDF reports
Local governments & organizations	Small-town town halls, schools, and organizations without an IT team	Educational support, affordable prices, ease of use

2. SMART Objectives of the MVP

SMART objectives define clear, measurable and achievable targets verifiable at the final presentation.

SMART Objective #1 : Authentication & Roles

Authentication & Roles	
Specific	Develop an authentication system with 2 distinct roles (CyberAudit & Solutions Admin / SME Client), protecting all sensitive routes
Measurable	100% of API routes tested and secured, it is verifiable via Postman tests in W7
Achievable	SimpleJWT + Django Permissions stack mastered: 1 week allocated (W3)
Relevant	Essential prerequisite: without authentication, no other feature can be delivered
Time-bound	Delivered and validated by end of Week 3

SMART Objective #2 : Service Request Form with Package Selection & Acknowledgment of Receipt

Service Request Form with Package Selection & Acknowledgment of Receipt	
Specific	Allow an SME customer to submit a request by choosing from among 4 service packages and automatically receive a confirmation email admin manages it with 4 statuses (Pending / In Progress / Completed / Archived)
Measurable	4 selectable packages, Celery email sent in under 30 seconds: Complete CRUD functional and 5 test scenarios validated (create, read, update status, filter, delete) W4
Achievable	Django REST Framework + React Form + Celery + SimpleJWT: Can be completed in 2 weeks (W3-W4)
Relevant	This is the core of the product: the package form and the acknowledgment of receipt provide immediate value to the customer
Time-bound	Available for delivery and demo at the end of week 4

SMART Objective #3 : Deployment & Production Security

Deployment & Security	
Specific	Deploy with HTTPS, anti-XSS (DOMPurify) and anti-SQL injection (Django ORM) protections validated
Measurable	Accessible via public URL, security tests passed (XSS, injection, brute-force)
Achievable	Railway/Render + Let's Encrypt, well-documented deployment, feasible in W8
Relevant	Cybersecurity project: jury expects a secured AND deployed application
Time-bound	Live before the final presentation (end of Week 8), but this could be extended.

SMART Objective #4 : User Experience

User Experience (NEW)	
Specific	A non-technical user (persona: Marie) must be able to submit an audit request without external help
Measurable	Task completed in under 3 minutes — validated by 3 user tests in W7
Achievable	Figma wireframes validated in W1, simplified form design in W4
Relevant	If the interface is unusable, no SME will adopt the platform regardless of its technical quality
Time-bound	User tests conducted and results documented before end of Week 7

3. Project Scope

The scope clearly defines what the MVP will and will not deliver, protecting the team from scope creep.

☑ IN SCOPE — 8 weeks	✗ OUT OF SCOPE — Version 2
Authentication & Security ✓ Registration, login with JWT ✓ 2 roles (Admin / Client) ✓ Route protection & HTTP headers ✓ Password hashing + rate limiting Forms & Requests ✓ Form with a selection of 4 service packages ✓ Automatic confirmation email (Celery) ✓ Admin dashboard: view and manage requests ✓ Client dashboard: track statuses in real time ✓ PDF report generation ✓ Awareness and training module Technical & Deployment ✓ Secure REST API (Django REST Framework) ✓ PostgreSQL DB with performance indexes ✓ XSS protection (DOMPurify) + anti-SQL injection ✓ Cloud deployment with HTTPS ✓ Technical documentation and README	Advanced V2 Features ✗ Real-time SOC (WebSocket) ✗ Automatic AI security score ✗ Mobile application (iOS / Android) ✗ Gamified training modules ✗ Sectoral score comparison ✗ Consultant marketplace ✗ OAuth2 integration (Google / LinkedIn) ✗ Public API for partners Outside Project Constraints ✗ Online payment system ✗ Multi-language support (i18n) ✗ Advanced analytics dashboards ✗ Third-party integrations (Jira, Slack) ✗ End-to-end message encryption ✗ Offline mode (PWA)

4. Feasibility study: 5 dimensions

A feasibility study verifies that the project is feasible before development begins. It prevents the team from committing to an unfeasible project.

Technical Feasibility

Criterion	Evaluation	Verdict
Controlled stack	Django, React, PostgreSQL (skills already acquired at Holberton)	☑ OK
Available bookstores	SimpleJWT, DRF, Celery, DOMPurify, all open-source and well-documented	☑ OK
Project complexity	Can be done in 8 weeks with a good division of labor	☑ OK
Deployment Infrastructure	Railway/Render: Free for student projects, automatic HTTPS	☑ OK

Financial Feasibility

Criterion	Evaluation	Verdict
Development cost	Projet étudiant : cost = time (€0)	☑ OK
Accommodation cost	Railway Free Tier ou Render Free: €0 for the portfolio demo	☑ OK
Tools and libraries	100% open-source: Django, React, PostgreSQL, Celery, Redis	☑ OK

Market Feasibility

Criterion	Evaluation	Verdict
Identified need	Market Study: 45% of SMEs Lack IT Support, Cyberattacks on the Rise (ANSSI 2023)	✔ Strong
Target defined	Small and medium-sized businesses (SMEs) and micro-businesses with fewer than 50 employees, local governments, and specialized firms	✔ Clear
Competition	Existing solutions (Cyber-malicious activity, data theft) are too complex or expensive	🌀 Opportunity

Operational Feasibility

Criterion	Evaluation	Verdict
Team available	2 developers over 8 weeks: defined schedule, clear roles	✔ OK
Workflow	Git + Discord + Notion + weekly points — workflow structured	✔ OK
Reachable area	Functional MVP intentionally limited to meet the schedule	✔ OK

Legal Feasibility

Criterion	Evaluation	Verdict
GDPR Compliance	Encrypted data, password hashing, right to erasure	✔ Scheduled
Intellectual Property	Open-source stack under permissive licenses (MIT, BSD, Apache)	✔ OK
Regulatory Context	The NIS2 Directive and GDPR reinforce the product's legitimacy and urgency	✔ Favorable

✔ **OVERALL VERDICT: FEASIBLE PROJECT ACROSS ALL 5 DIMENSIONS** All conditions are in place to begin development as early as Week 1.

5. Minimum Viable Product (MVP)

The MVP is the simplest version of the product that delivers real value to the user and allows for the validation of key assumptions.

✔ IN THE MVP : 8 weeks	⌚ NOT MVP — Version 2
✔ JWT Registration / Login (2 roles)	X Real-time SOC (WebSocket)
✔ Audit request form with package selection (4 packages)	X Automated security score
✔ Automatic acknowledgment email (Celery)	X Gamified training modules
✔ Client Dashboard (status tracking)	X Mobile app
✔ Admin dashboard (viewing & managing requests)	X Industry-wide score comparison
✔ Basic PDF report generation	X Consultant marketplace
✔ Email notifications (Celery async)	X OAuth2 integration (Google/LinkedIn)
✔ Training module (list + content)	X Public API for partners
✔ HTTPS deployment in production	

Key hypothesis to be validated with the MVP

“An SME without IT expertise can use a simple web platform to select a cybersecurity service package, submit an audit request, receive a confirmation of receipt, and track the status of their request, without needing an on-site consultant.”

Step-by-Step Ideation: How We Got to the MVP

Each step builds on the previous one and gradually expands upon it, like the steps of a staircase.

Step	An idea that developed gradually
1	Simple IT Issue Reporting Form
2	Ticket system with status tracking (Admin / Customer)
3	Select the type of service from among the 4 services offered by CyberAudit & Solutions
4	Select a package (Audit / Security / Protection / Premium) with a summary
5	Automatic confirmation email with case number
6	Risk analysis associated with each audit request
7	PDF report generated automatically after analysis
8	☒ + Tracking dashboard + Training module + Email alerts = FULL MVP

MVP Success Criteria: Defense

Success criteria	Manager	Semaine cible	Statut
Application deployed online using HTTPS	James + Tommy	W11-12	☒ W8 Target
2 operational roles (Admin + Client)	James	W3	☒ W3 Target
Package form with 4 service options	Tommy + James	W4	☒ W4 Target
Automatically generated confirmation email	James + Tommy	W4	☒ W4 Target
An administrator can view and edit a request	James + Tommy	W4	☒ W4 Target
Complete demo script for the presentation	Tommy	W11-12	☒ W8 Target
1 PDF report generated from the interface	James	W5	☒ W5 Target
XSS and injection security tests passed	James + Tommy	W7-10	☒ W7 Target
UX testing: task < 3 min (3 users)	Tommy	W7-10	☒ W7 Target

6. Risk Identification & Mitigation Measures

Level	Risk Identified	Impact /5	Prob. /5	Mitigation Measure
● High	Poor time estimation: features not delivered by W12	5	4	Strictly prioritise MVP from W1, break into daily tasks, weekly backlog review
● High	Technical blocker on Celery/Redis: emails not working	4	3	Reserve full W6 for async, document config, tutorials identified in advance
● High	Git merge conflict: code loss or regression	4	3	Strict branch conventions, mandatory PRs with cross-review
● Moderate	Limited experience with cloud deployment	3	3	Plan a test deployment session from W6 and do not wait until W12
● Moderate	Interface too complex for non-technical users (poor UX)	3	2	Figma wireframes in W1, user tests with persona in W7
● Moderate	Undetected security vulnerability before presentation	4	2	Dedicated security tests in W7 (XSS, SQL injection, brute-force)
● Low	Hosting issue on presentation day	5	1	Working local backup (localhost) + demo screenshots ready
● Low	Scope creep: uncontrolled feature expansion	3	2	Scope document agreed W1, any change requires formal team decision

7. Project Charter: Summary

Section 1: Summary, Objective & Success Criteria

Field	Content
Project Name	CyberAudit & Solutions: Web platform for cybersecurity audit management
Main Objective	Deliver a functional and secure MVP enabling SMEs to submit and track cybersecurity audits
Sponsor	Holberton School Dijon and CyberAudit & Solutions (Les Entrep' "Entrepreneurship Program")
Success Criteria	HTTPS-deployed app + 2 functional roles + generated PDF report + security tests passed + UX validated + demo at presentation

Section 2 : Timeline

Week	Main Deliverable	Owner
W1	Wireframes, DB schema, persona, signed project charter	Tommy + James
W2	Django + React + PostgreSQL environment operational	Tommy + James
W3	Functional JWT auth: 2 secured roles	James (back) + Tommy (front)
W4	Audit request CRUD + Admin/Client dashboards	James (API) + Tommy (UI)
W5	PDF reports + training module + notifications	James (PDF) + Tommy (UI)
W6	Celery async tasks + pagination + DB optimisation	James (lead)
W7-10	Full tests: security, API, end-to-end, UX user tests (x3)	Tommy + James
W11-12	HTTPS deployment + documentation + presentation slides	Tommy + James

Section 3 : Budget

Resource	Detail	Cost
Development team	Tommy JOUHANS + James ROUSSEL	€0 (student project)
Backend + DB hosting	Railway Free Tier	€0
Frontend hosting	Vercel or Render Free	€0
Tech stack	Django, React, PostgreSQL, Celery, Redis	€0 (open-source)
Collaboration tools	GitHub, Discord, Figma/Balsamic mockup(30-day trial)	€0 (free plans)
TOTAL BUDGET	100% free project	€0
